UP41/E-DX 12/24V 2,5 bar electronic water pressure dual pump system + PCS 41 l/min

Quick Overview

High-performance self-priming pressurization system consisting of two pumps connected and managed by an integrated electronic control that automatically regulates motor speed according to the required flow rate, ensuring maximum efficiency, reduced energy consumption, and particularly quiet operation. The integrated control system actively protects the pumps against overload and continuously monitors operation through two indicator LEDs. It also includes automatic shut-off with a “tank empty” warning for enhanced safety and reliability. The compact 0.3-liter expansion vessel, integrated into the system, helps stabilize pressure and protect the system against water hammer and sudden pressure surges. The PCS control panel is included in the kit..
